

PHYSICAL REVIEW LETTERS

moving physics forward

Dear Sir or Madam,

We are pleased to inform you that the Letter

Signatures of enhanced superconducting phase coherence in optimally doped $\text{Bi}_2\text{Sr}_2\text{Y}_{0.08}\text{Ca}_{0.92}\text{Cu}_2\text{O}_{8+\delta}$ driven by midinfrared pulse excitations

F. Giusti *et al.*
Phys. Rev. Lett. **122**, 067002 (2019)

Published 15 February 2019

has been highlighted by the editors as an Editors' Suggestion. Publication of a Letter is already a considerable achievement, as *Physical Review Letters* accepts fewer than 1/4 of submissions, and is ranked first among physics and mathematics journals by the Google Scholar five-year h-index. A highlighted Letter has additional significance, because only about one Letter in six is highlighted as a Suggestion due to its particular importance, innovation, and broad appeal. Suggestions are downloaded twice as often as the average Letter, and are covered in the press substantially more often. If Suggestions were a separate publication, they would have an Impact Factor of 17. More information about our journal and its history can be found on our webpage prl.aps.org.

Yours sincerely,

A blue ink signature of Hugues Chaté, consisting of several vertical and diagonal strokes.

Hugues Chaté
Editor
Physical Review Letters

A black ink signature of Michael Thoennessen, featuring a stylized 'M' and 'T'.
